Differential Equations with Boundary-Value Problems 008 ...

In mathematics, in the field of differential equations, a boundary value problem is a differential equation together with a set of additional constraints, called the boundary conditions. A solution to a boundary value problem is a solution to the differential equation which also satisfies the boundary conditions. Boundary value problems arise in several branches of physics as any physical

We use the solution in the text: $u(x, y) = u_1(x, y) + u_2(x, y) = \sum_{n=1}^{\infty} \sum_{m=1}^{\infty} E_{nm} \sin m\pi x \sin n\pi y + u_2(x, y)$, where u_1 is the solution of an associated Poisson problem with zero boundary data, and u_2 is the solution of the Dirichlet problem with the given boundary data. We have $E_{nm} = \frac{1}{4} \frac{1}{\pi^2(m^2 + n^2)}$.
